The application has been amended as follows:

---- Please cancel claims 18 and 31.

---- Please replace the first two lines of claim 32 with the following limitations:

32. A system for estimating body states of a vehicle comprising:

a first linear accelerometer and a second linear accelerometer mounted to the vehicle in separate locations from each other, the first and second linear accelerometers being configured to measure the acceleration of the vehicle in a first direction and generate measured first and second linear acceleration signals based on the acceleration of the vehicle in the first direction, the measured first and second linear acceleration signals defining a first set of linear acceleration signals;

a third linear accelerometer and a fourth linear accelerometer mounted to the vehicle in separate locations from each other, the third and fourth linear accelerometers being configured to measure the acceleration of the vehicle in a second direction and generate measured third and fourth linear acceleration signals based on the acceleration of the vehicle in the second direction,

Art Unit: 3664

wherein the second direction is different from the first direction, the measured third and fourth linear acceleration signals defining a second set of linear acceleration signals; and

a filter configured to process the first and second sets of linear acceleration signals using a model to generate at least one of a roll angle, a roll rate, and a yaw rate, the model being a model of the vehicle dynamics and the linear accelerometers, the model being based in part on distances along at least one of an x-axis, a y-axis, and a z-axis from each of the linear accelerometers to at least one of a yaw axis and a roll axis of the vehicle,

the first linear accelerometer being located a first distance from the center of gravity of the vehicle, and the second linear accelerometer being located a second distance from the center of gravity of the vehicle,

the third linear accelerometer being located a third distance from the center of gravity of the vehicle, and the fourth linear accelerometer being located a fourth distance from the center of gravity of the vehicle,

wherein the model is based on at least one of the following equations:

---- Please change line 1 in claim 19 as follows: replace the phrase, “The system of claim 18” with the phrase, --The system of claim 32--.

---- Please change line 1 in claim 20 as follows: replace the phrase, “The system of claim 18” with the phrase, --The system of claim 32--.

---- Please change line 1 in claim 21 as follows: Replace the phrase, “The system of claim 18” with the phrase, --The system of claim 32--.
